Grit Angela Duckworth 2016-05-03 In this instant

New York Times bestseller, Angela Duckworth

shows anyone striving to succeed that the secret to

outstanding achievement is not talent, but a special

blend of passion and persistence she calls "grit."

"Inspiration for non-geniuses everywhere"

(People). The daughter of a scientist who

frequently noted her lack of "genius," Angela

Duckworth is now a celebrated researcher and

professor. It was her early eye-opening stints in

teaching, business consulting, and neuroscience that

led to her hypothesis about what really drives

success: not genius, but a unique combination of

passion and long-term perseverance. In Grit, she

takes us into the field to visit cadets struggling through their first days at West Point, teachers working in some of the toughest schools, and young finalists in the National Spelling Bee. She also mines fascinating insights from history and shows what can be gleaned from modern experiments in peak performance. Finally, she shares what she's learned from interviewing dozens of high achievers—from JP Morgan CEO Jamie Dimon to New Yorker cartoon editor Bob Mankoff to Seattle Seahawks Coach Pete Carroll. “Duckworth’s ideas about the cultivation of tenacity have clearly changed some lives for the better” (The New York Times Book Review). Among Grit’s most valuable insights: any effort you make ultimately counts twice toward your goal; grit can be learned, regardless of IQ or circumstances; when it comes to child-rearing, neither a warm embrace nor high standards will work by themselves; how to trigger lifelong interest; the magic of the Hard Thing Rule; and so much more. Winningly personal, insightful, and even life-changing, Grit is a book about what goes through your head when you fall down, and how that—not talent or luck—makes all the difference. This is “a fascinating tour of the psychological research on success” (The Wall Street Journal).

The Great Curriculum Debate Tom Loveless
2004-05-13 Since the early twentieth century, American educators have been engaged in a heated debate over what schools should teach and how they should teach it. The partisans—"education progressives" and "education traditionalists"—have usually kept their disagreements within the walls of the nation's schools of education. Periodically, however, arguments have erupted which have generated headlines and attracted public attention, making clear the potential for bitterness and rancor in education politics. In the 1990s, progressives and traditionalists squared off in a dispute over reading and mathematics. Arguments over how best to teach these two subjects is detailed in *The Great Curriculum Debate: How Should We Teach Reading and Math?* This book includes contributions from distinguished scholars from both sides of the debate, as well as influential nonpartisans. The proponents of "whole language" and "phonics" present their opposing views on reading. Advocates and opponents of "NCTM math reform"—the agenda of the National Council of Teachers of Mathematics (NCTM)—discuss their differing opinions about math. Although the authors disagree on many of the most important aspects of learning, they agree on one point: the school

curriculum matters. Decisions made now about the content of reading and mathematics will have long term consequences, not only for students and schools, but for society as a whole. Contributors include E. D. Hirsch Jr. (University of Virginia), Gail Burrill (Mathematical Sciences Education Board), Michael T. Battista (Kent State University), David C. Geary (University of Missouri, Columbia), Roger Shouse (Penn State University), Adam Gamoran (University of Wisconsin, Madison), Richard Askey (University of Wisconsin, Madison), Diane Ravitch (New York University), Catherine E. Snow (Harvard University), Margaret Moustafa (California State University, LA), Richard L. Allington (University of Florida), William Lowe Boyd (Penn State University), and Douglas E.
