Asset Backed Securities – A solution for financial management in International Corporates? Gina Slabke 2008-02-08 Seminar paper from the year 2007 in the subject Business economics - Investment and Finance, grade: 1,5, Berlin School of Economics, course: Global Finance, 11 entries in the bibliography, language: English, abstract: Almost all companies do have an effective portfolio management nowa-days. Nevertheless, it is not unusual for companies to have very high values in receivables. Especially for companies with a turnover of more than 100 million EUR, the receivables grow to a value of 10 million EUR or more. This capital is usually unavailable for the company and may become available using Asset Securitisation to refinance the receivables. Nowadays, Securization is exercised in many branches, but the focus of this paper should be on ABS-projects with banks. The influence of Basel II on the behaviour of credit institutions further reinforces the importance of Asset Securitisation as a tool for companies to improve capital costs and the balance sheet rations. This again has implications for the rating of enterprises. Due to the growing interest in Asset Securitisation, a lot of research has been done by the European financial institutions. ABS might be

designed in many different variants. To consider all of them, a realistic volume of this work would be exceeded. Target of this paper is to give an overview about the function of ABS and the affiliated possibilities and chances to use them in practice. In the first part of this paper, the question of definition and of the basic structure of Asset Backed Securities will be examined. Furthermore, the requirements for an Asset Securitisation in respect to the portfolio of as-sets will be explained. The second part is concerned with a detailed outline of the two groups of ABS, namely True Sale and Synthetic Sale and the allied key role of the KfW. Thereby, the questions of adding value and benefits for the differ-ent participants within structured finance transactions are examined. In the third part, general facts and figures as well as the advantages and disadvantages from the bank's perspective are regarded. Finally, our conclusion informes about the current situation of the Euro-pean market for securization and ABS and its propable development as a modern financing insrument, especially for banks, in the future.

International Financial Management Geert Bekaert 2017-11-30 This new and fully updated edition of International Financial Management blends theory, data analysis, examples and practical case situations to equip students and

business leaders with the analytical tools they need to make informed financial decisions and manage the risks that businesses face in today's competitive global environment. Combining theory and practice, the authors offer the reader a multitude of real-world examples and case studies, emphasising fundamental concepts, principles and analytical theories to enable students to understand not only what to do when confronted with an international financial decision, but why that choice is the correct one. Features include: real data analysis - all fully updated for the third edition; extended cases illustrating practical application of theory; point-counterpoints offering insight into contentious issues; concept boxes that explore and illustrate key concepts; and end-of-chapter questions. Suitable for M.B.A and advanced undergraduate business students taking a course in international financial management or international finance.

Blockchain-based New Financial Infrastructures Qian YAO 2022-09-08 This book focuses on development of blockchain-based new-generation financial infrastructures, in which a systematic, complete theoretical framework is proposed to explore blockchain-based securities trading platform, central securities depository (CSD), securities settlement system (SSS), central counterparty (CCP), payment system (PS) and trade repository (TR). The blockchain-based new FMI has attracted much attention in the securities industry. At present, the cross-border depository receipt (DR) business faces a dilemma between efficiency and security. In this book, the author proposes a blockchain-based new DR solution, manifesting the potential for using blockchain technology in the FMI field. In addition, using Hashed Timelock Contract (HTLC) as the underlying technology in the DR scenario, specific process and operations are proposed for delivery versus payment (DvP), delivery versus delivery (DvD) or payment versus payment (PvP) and other exchange-of-value methods. This book further studies how to carry out opening positions, end-of-day settlement of margin, forced liquidation and

settlement at maturity, for exchange-traded derivatives, such as futures and options, under the blockchain-based technological framework. Blockchain technology not only naturally fits into the decentralized or non-centralized characteristic of the OTC market but also can effectively address the pain points and difficulties of the OTC market. This book provides an in-depth analysis of existing specific issues in China's bond market, regional equity markets and asset management market, among other OTC markets, and proposes relevant blockchain-based solutions. Blockchain technology does not change the public policy objectives for FMI. The blockchain-based new FMIs are still subject to compliance, safety and efficiency requirements. This book provides a comprehensive assessment of the applicability of the Principles for Financial Market Infrastructures (PFMI) to them, in particular, analyzes their legal basis, off-chain governance and system security.

Financial Innovation: Theories, Models and Regulation G. V. Satya Sekhar 2018-01-01 Financial innovation is a regular feature of the global financial system. Financial innovation results in greater economic efficiency over time. In the process of creating a new financial product, besides basic theory of financial management, a financial engineer needs to acquire knowledge of optimization and financial modeling techniques. Modern financial innovation is underpinned by a rich literature including the seminal studies by Levich (1985), Smith, Smithson, and Wilford (1990), Verghese (1990), Merton (1992), Levine (1997), John D Finnerty (2002), Tufano (2003) and Draghi (2008), among many others. This book corresponds to the need to provide an integrated study on financial innovation and the economic regulatory mechanism. A key part of financial innovation covered in the book is the process of creating innovative financial securities and derivative pricing that offers new pay-offs to investors. The book also covers a selection of empirical studies corroborating financial innovation theories. It also exposes myths surrounding performance evaluation models. This book is presented in six

chapters. The first chapter outlines important considerations on the application of financial innovation theories. The second chapter presents the theories that underpin financial innovation practice. The third chapter focuses on use of technology for financial modeling. The fourth chapter identifies the relationship between financial innovation and the wider economic system. The fifth chapter discusses the place of financial innovation in the global financial system. The sixth and final chapter presents a comparative analysis of India and the United States.

Why International Cooperation Is Failing Thomas Kalinowski 2019-09-18

Since the global financial crisis of 2008/09, international cooperation has failed to curb volatile financial markets. Changes in the global rules of finance discussed in the G20 during the last decade remain limited, and it is uncertain whether they are suitable to help mitigate and manage future crises to come. This book offers an alternative to the popular notion that this failure is the result of the 'nature' of the international system, the clash of national egoisms, or lack of leadership. It instead investigates problems of international cooperation by looking at their deeper structural origins in the competition of different models of capitalism. US finance-led, EU integration-led, and East Asian state-led capitalism complement each other globally but have conflicting preferences on how to regulate international finance. This interdependence of capitalist models is relatively stable but also prone to crises caused by volatile financial flows, global economic imbalances, and 'currency wars'. By bringing together approaches from International Political Economy and Comparative Capitalism, this book shows that regulating international finance is not a technocratic exercise of fine-tuning the machinery of international institutions, but rather a political process. International cooperation can only be successful if it goes hand in hand with deep domestic changes in each of these capitalist models.

Green Finance, Sustainable Development and the Belt and Road Initiative Fanny M. Cheung 2020-12-22 Can China's Belt and Road Initiative (BRI) promote sustainable development, alongside its primary aims of increasing commercial connectivity with China's partners? In discussions of the BRI the focus has tended to be on the implications for infrastructure construction, connectivity, and economic diplomacy. Rather less attention has been paid to its potential impact on sustainability. The initiative has not only set principles to prevent climate change and promote sustainable development, but also pledged to align with the UN's environmental objectives. The contributors to this volume describe and evaluate the consequent policy coordination in the areas of green finance, green energy, and sustainable development in the Belt and Road regions. They examine both the challenges and opportunities of these projects, and the role that Hong Kong can play in supporting their assessment, finance, and implementation. With contributions from authors based in mainland China, Hong Kong, Australia, Qatar, the UK, and the US –

with experience in corporate social responsibility, international finance, environmental policy, and international relations – this book presents a thorough and rigorous analysis of the green side of the BRI. A valuable resource for scholars of the BRI and its many implications for China, its partners, and the development of sustainable infrastructure.

The Business Solution to Poverty Paul Polak 2013-09-09 Right now the number of people living on \$2 a day or less is more than the entire population of the world in 1950. These 2.7 billion people are not just the world's greatest challenge—they represent an extraordinary market opportunity. By learning how to serve them ethically and effectively, businesses can earn handsome profits while helping to solve one of the world's most intractable problems. The key is what Paul Polak and Mal Warwick call *Zero-Based Design*: starting from scratch to create innovative products and services tailored for the very poor, armed with a thorough understanding of what they really want and need and driven by what they call “the ruthless pursuit of affordability.” Polak has been doing this work for years, and Warwick has extensive experience in both business and philanthropy. Together, they show how their design principles and vision can enable unapologetic capitalists to supply the very poor with clean drinking water, electricity, irrigation, housing, education, healthcare, and other necessities at a fraction of the usual cost and at profit margins attractive to investors. Promising governmental and

philanthropic efforts to end poverty have not reached scale because they lack the incentives of the market to attract massive resources. This book opens an extraordinary opportunity for nimble entrepreneurs, investors, and corporate executives that will result not only in vibrant, growing businesses but also a better life for the world's poorest people.

Corporate Finance Stephen A. Ross 2002

Procurement Finance Bernardo Nicoletti 2018-12-24 This book presents a

business model on how to structure the relationship between financial services and procurement. The need for new models is particularly important to support small and medium enterprises (SMEs) where there is an evident difficulty in accessing credit. Due to this context, innovative solutions must be introduced. The objective of this book is to determine how innovation can support the dynamic and volatile international context and the increasingly relevant function of procurement. It is becoming more and more important to take into account complex international transactions with notably long payment terms. Organizations need to manage the best way to handle the financial relationships and the risks related to credit provision and payments. This book presents an end-to-end support to procurement, including trade finance, supply chain finance, and related payments. In addition, the enterprises need to keep sufficient liquidity levels in the short and medium term. This is a constant challenge today, with the turbulence of financial markets and a continuing climate of economic uncertainty making it harder to obtain external funding. Businesses need to optimize the working capital. This can be done through the innovative concept of procurement finance, which allows SMEs to benefit by the new vision of collaborative procurement. This book provides several practical examples of advanced procurement finance solutions. It demonstrates how the use of process improvement and technology can help in overcoming the current financially difficult situation. In addition, based on the business model presented, the integrated approach to procurement finance allows sustainable solutions which will be of interest to academics, researchers, managers, and practitioners in both buyer and vendor companies, as well as in banks and other financial institutions.

Latin American Development Priorities Bjørn Lomborg 2010-01-28 Many countries in Latin America and the Caribbean have achieved considerable economic growth, yet the region still faces many seemingly intractable problems. The conventional wisdom in development agencies - that prioritization is impossible and that everything must be done - is simply not effective. *Latin American Development Priorities* shows how limited resources could be used for the greatest benefit of the Latin American and Caribbean region. A panel of economists met over three days in San José to review proposals to tackle the ten most important challenges, which emerged from a survey by the Inter-American Development Bank. The expert panel was asked a question which appears simple but is actually very difficult to answer: What should Latin American governments do with an additional nominal \$10 billion? Hard choices are needed if Latin America's problems are to be tackled effectively. This book provides the means to make those choices as objectively as possible.

Financial Accounting with International Financial Reporting Standards Jerry J. Weygandt 2018-07-18 While there is growing interest in IFRS within the US, interest outside the US has exploded. Weygandt's fourth edition of *Financial Accounting: IFRS* highlights the integration of more US GAAP rules, a desired feature as more foreign companies find the United States to be their largest market. The highly anticipated new edition retains each of the key features (e.g. TOC, writing style, pedagogy, robust EOC) on which users of Weygandt *Financial Accounting* have come to rely, while putting the focus on international companies/examples, discussing financial accounting principles and procedures within the context of IFRS, and providing EOC exercises and

problems that present students with foreign currency examples instead of solely U.S. dollars.

Governance of Global Financial Markets Emilios Avgouleas 2012-04-26 The

recent financial crisis proved that pre-existing arrangements for the governance of global markets were flawed. With reform underway in the USA, the EU and elsewhere, Emilios Avgouleas explores some of the questions associated with building an effective governance system and analyses the evolution of existing structures. By critiquing the soft law structures dominating international financial regulation and examining the roles of financial innovation and the neo-liberal policies in the expansion of global financial markets, he offers a new epistemological reading of the causes of the global financial crisis. Requisite reforms leave serious gaps in cross-border supervision, in the resolution of global financial institutions and in the monitoring of risk originating in the shadow banking sector. To close these gaps and safeguard the stability of the international financial system, an evolutionary governance system is proposed that will also enhance the welfare role of global financial markets.
