Computer-Based Technology for Special and Multicultural Education Lenwood Gibson 2017-10-11 *Computer-Based Technology for Special and Multicultural Education* is a comprehensive textbook for integrating computer technology into the classroom. Experienced contributors discuss the growing role of technology in teaching students with exceptional learning needs. Unlike the competition, this textbook addresses classroom technology through multiple lenses: special and multicultural education. Special education teacher candidates, at all levels, will benefit from this in-depth coverage of history, terminology, and research in computer based technology. This background will help readers determine how and when to use technology for the most effective educational experience. Topics include using the combination of computer hardware and specific software programs to deliver evidence-based teaching strategies as supplemental instruction. *Computer-Based Technology* breaks down teaching methods by addressing the most critical academic areas: reading, writing, mathematics, S.T.E.M., and social studies. Authors acknowledge the differences in each academic area, and how to best incorporate technology into each of these classrooms. Authors use the term "exceptional learners" throughout the text, which describes not only special education students, but also the experience of students with culturally and linguistically diverse backgrounds. These students are faced with unique circumstances and challenges that affect their educational processes.
