Psychology of the Image Michael Forrester 2012-12-06 Psychology of the Image outlines a theoretical framework bringing together the semiotic concepts developed by Charles Peirce, the sociological insights of Ervin Goffman and the psychoanalytic ideas of Jacques Lacan. Image studies in fashion, advertising, photography, film studies and psychology have been influenced by these theorists in significant ways. The framework presented helps the reader understand how these ideas relate to the study of different domains of the image: the internal imagery of dreams, external images such as the photograph and image processes which span both contexts, e.g., images we have about ourselves. The topics discussed are organised into three themes. The first considers mental imagery, including sound and dreams. The second addresses the interdependent nature of internal and external images, e.g., the gendered self and social identity. In the third theme, attention turns to external images including television, film, photography, the computer and the internet. Psychology of the Image will be of interest to undergraduates, postgraduates, lecturers and researchers in the fields of psychology, media studies and sociology.

*15 Years of The Mountain School of Arts (Teacher's Edition)* John Pike 2020-10-21 The work on this book started in March 2020 with an archive of pictures acquired from previous Mountain School of Arts students, staff and faculty. The collection consists of around 2000 images taken over the last 15 years. Most of the photographs were shot with older digital or phone cameras with the addition of some analog footnotes. We consider the photographs to be documents of the many different shapes, forms and people that have taken part in the Mountain School of Arts program since its inception in 2005.
